Types of wig construction

Wefted base: Rows of fibre are joined together in the shape of a cap using elasticised strips. This is standard for our modern wigs and makes them easy to wear, comfortable and breathable. Soft velvet at front, nape and ear tabs enhances the comfort and the velcro tapes ensures a secure custom fit.

Monofilament: A fine mesh that fibre or hair is hand-tied onto to give the appearance that the hair or fibre is growing from your own scalp. Some wigs include a monofilament top, parting or crown on a wefted or hand-tied base.

Hand-tied base: Each strand of fibre or hair is individually hand threaded onto a very fine, lightweight lace base. This base gives the most realistic movement to the fibre and hair and looks just like the hair or fibre is growing from your own scalp.

Monofilament

Hand-tied

Lace Front: A fine lace added to the front of the wig to give a natural looking hairline.

Wig sizing service: As all wigs have a variation in size we offer a wig sizing service so that you can achieve the ultimate fit. We can stretch wigs by approximately 1 inch, wefted bases have the most flexibility with limited stretch in monofilament and hand tied. We can reduce the size by taking measurements and applying these to the wig. This is a chargeable service.

Extra services: We are able to add oil silk patches to any of our wigs so that you can use special wig tape for added security. We also offer a variety of combs and grips that can be added for extra security. All added services are chargeable.

Cap sizes:

Average: approximately between 54cm - 56cm (21 1/4" - 22")

Petite: approximately between 51cm - 53cm (20" - 20 3/4")

Large: approximately between 57cm - 59cm (22 1/4" - 23 1/4")
